

# Wi-Fire

Reliable Wireless Connectivity for the Business Traveler

As a business traveler, you rely on your laptop to remain productive and stay connected with the office and your customers. Getting online wirelessly while you're on the go isn't optional. It's mission critical. To be more efficient than your competition, you need high speed and high bandwidth, accessible in a convenient location and executable on a full-sized keyboard and monitor.

## You need productivity. You need the Wi-Fire.

No more dropped signals and spotty wireless connections. Wi-Fire allows you to tap into remote business applications, manage your email and keep your finger on the pulse—without squinting at a tiny screen and thumb-typing on a credit card-sized keyboard. And just try performing these essential business tasks on a painfully slow cell-phone connection.

You could wander around, wasting precious time, looking for the closest and strongest access point. You could suffer through a spotty, slow connection that drops at the most inopportune time. Or you could plug in your Wi-Fire, see all those access points you never even knew existed and get online—now!

## The Wi-Fire Offers True Productivity

**With the Wi-Fire you can stay as productive on the road as you are in the office.** Tap business application software... access and transmit files...surf the Internet...stream audio and video...manage your email...conveniently and with the consistency you demand.

Whether you are at a hotel or airport with dead spots and painfully slow connections...just out of reach of a municipal hotspot...or in a conference center with bunker-like walls...the Wi-Fire will provide you with the strongest, fastest wireless signal.

The Wi-Fire is a compact, range extending USB device that enables you to access a wireless Internet connection from up to 1,000 feet away—three times the range of your internal wireless adapter. The Wi-Fire uses a powerful directional antenna, highly sensitive receiver and proprietary software to find and enhance normal WiFi signals.

“The Wi-Fire is ideal for people who travel quite a bit and are trying to pick up WiFi signals outside of a normal home or office environment.”

—Ken Smith, Boston MA

“My clients don't care if I'm in Los Angeles or Ludlow, South Dakota—they expect me to service their account whenever they call. I can't tell you how much more efficient I am since I got my Wi-Fire. Connecting to the Internet at high speeds means I can do my job anywhere.”

—Ruth Miller, Seattle WA

“I'm on the road constantly as executive vice president of a major software company. The Wi-Fire has increased my efficiency and added hours of useful time to my day.”

—Bob Sandie, Palo Alto CA
